

Chapter 6 — Intent and Planning Architecture

Field	Value
Status	Revised after whole-book constitutional and cross-chapter audit
Version	0.3
Scope	Translate Owner-defined purpose into living, reviewable plans while preserving the distinction between destination, planning, execution, and outcome.
Constitutional basis	Decisions 12, 16, 20–21, 31, 35, 46, 54–57
Owner review	No unresolved Owner decision after whole-book audit

1. Purpose

Translate Owner-defined purpose into living, reviewable plans while preserving the distinction between destination, planning, execution, and outcome.

2. Authoritative Responsibilities

Component	Authoritative responsibility
Intent Manager	Intent Objects, hierarchy, approval state, health and lifecycle
Planning Service	Plan Graphs, alternatives, dependencies and replanning history
Goal Health Service	Progress, momentum, blockers, confidence, risk and alignment
Initiative Governor	Initiative budgets, interruption policy and permitted proactive work

3. Core State and Records

Object	Required content
Intent Object	Purpose, motivation, desired outcome, constraints, horizon, review cadence, confidence and Owner approval.
Plan Graph	Strategies, milestones, tasks, dependencies, assumptions, verification and approved flexibility.
Intent Conflict	Competing intentions, affected outcomes, tradeoffs and required Owner judgment.
Owner Compass	Evidence-backed representation of stated enduring priorities; never an independent source of values.

4. Runtime Workflow

1. Capture the Owner's stated purpose without silently promoting ordinary conversation into a durable goal.
2. Classify intent as immediate, project, strategic or enduring and request approval where persistence or autonomy changes.
3. Generate alternatives and a Plan Graph with dependencies, risks, evidence needs, verification and resource estimates.
4. Evaluate alignment, goal health, policy, authority and conflicts before work reaches execution.
5. Permit replanning inside approved flexibility; return material destination changes to the Owner.
6. Record outcomes and revise plans without rewriting the originating intent or historical decisions.

5. Interfaces and Contracts

All commands, queries and events are typed, versioned, authenticated and correlated. Commands request mutation from the authoritative owner; queries declare consistency and privacy scope; immutable events record completed facts with identity, causation, authorization, provenance and integrity metadata.

6. Failure and Recovery

- Ambiguous destination: ask or preserve a provisional Intent Object; do not invent purpose.
- Conflicting goals: surface the conflict and tradeoffs; do not silently choose a value hierarchy.
- Stalled work: update goal health and recommend options; inactivity is not permission to retire the goal.
- Missing resources or providers: replan or defer without weakening policy or authority.

7. Constitutional Guarantees

- Only the Owner defines, adopts, materially changes or retires durable goals.
- Every autonomous action traces to an approved intent and current delegation.
- Plans may evolve; the destination and historical intent remain attributable.
- Initiative is bounded by policy, authority, attention budget and Owner-configured tolerance.

8. Prohibited Behaviors

- No component may silently broaden authority, reinterpret Owner intent, erase dissent, or treat a derived projection as authoritative state.
- No degraded dependency may silently change policy, identity, trust, authentication, verification or evidence requirements.
- No provider, model, node, Presence, secret, relationship or network location receives constitutional authority by implication.

9. Observability and Verification

The subsystem records correlation, identity, policy/authority context, state versions, decisions, limitations, failures, recovery and outcomes. Verification is risk-scaled and produces durable evidence. Status reporting is derived from governed state rather than model assertion.

10. Source Alignment and Review

This chapter directly implements Decisions 12, 16, 20–21, 31, 35, 46, 54–57. The v0.2 rewrite restores the source-specific objects, workflows and guarantees missing from v0.1. Final disposition is recorded in the separate source-alignment and constitutional-audit reports.

Whole-Book Audit Resolution

The following requirements supersede any ambiguous earlier wording in this chapter and are incorporated into this edition:

- Embedded author approval is not conformance evidence. This chapter's constitutional status is determined only by the independent whole-book audit.
- No substantive constitutional or cross-chapter correction was required in this edition.
