This record certifies the architecture document set. It does not certify a future implementation or deployment.

# Executive Disposition

Book II passes the final constitutional and cross-chapter architecture audit.

The authoritative chapter set:

- contains all 35 chapters in Markdown, DOCX, and PDF;
- maps all 58 Book I constitutional decisions;
- incorporates all three Owner decisions raised by the independent whole-book audit;
- resolves all seven material cross-chapter responsibility conflicts;
- contains no remaining identified constitutional contradiction;
- contains no remaining Owner decision requiring resolution before architecture certification.

This certification applies to the architecture specification. It does not certify a future implementation, deployment, operational configuration, or third-party capability. Those artifacts must demonstrate their own conformance to Book I and Book II.

## 1. Certification Basis

The certification review treated Book I as the supreme authority and ignored embedded self-approval statements from earlier Book II drafts.

The review evaluated:

1. Constitutional coverage across Decisions 1–58.
2. Conflicts between Book II requirements and Book I.
3. Conflicts among Book II chapters.
4. Ownership of canonical state and lifecycle authority.
5. Protected-action authorization and recovery behavior.
6. Experience Ledger preservation and authorized deletion semantics.
7. Constitutional succession, leases, and invariant-change procedures.
8. Presence of complete Markdown, DOCX, and PDF editions for every chapter.
9. Visual integrity of the revised PDF set.

## 2. Authoritative Chapter Set

| Chapters | Authoritative version | Formats             |
|----------|-----------------------|---------------------|
| 1–5      | v0.2                  | Markdown, DOCX, PDF |
| 6–20     | v0.3                  | Markdown, DOCX, PDF |
| 21–35    | v0.2                  | Markdown, DOCX, PDF |

Older chapter editions remain historical artifacts and are not authoritative.

## 3. Constitutional Coverage

| Measure                            | Result |
|------------------------------------|--------|
| Book I decisions evaluated         | 58     |
| Book I decisions mapped in Book II | 58     |

|                                                    |    |
|----------------------------------------------------|----|
| Book II chapters evaluated                         | 35 |
| Chapters present in all required formats           | 35 |
| Unmapped constitutional decisions                  | 0  |
| Identified constitutional contradictions remaining | 0  |

The coverage test is bidirectional in intent: every constitutional decision has architectural implementation coverage, and every major Book II component has either a constitutional purpose or a necessary engineering rationale.

## 4. Closed Owner Decisions

### OR-01 — Experience Ledger Deletion Semantics

**Final rule:** The Experience Ledger sequence remains immutable. Authorized deletion uses cryptographic payload erasure and removes non-authoritative copies, caches, indexes, and external replicas. A minimal non-sensitive tombstone remains with authority, time, scope, and proof of deletion.

Deletion requires the Owner Authorization Ceremony. Removal of the event identity or tombstone would require a constitutional amendment.

**Implemented in:** Chapters 10, 12, 19, 24, 25, 28, and 35.

### OR-02 — Recovery Constitutional Lease

**Final rule:** A pre-registered, independently attested successor may receive a short-lived constitutional recovery lease only after the prior lease is provably expired and quorum agrees on the latest valid constitutional state.

The lease:

- may last no longer than 24 hours;
- requires fresh Owner-specific authorization for every extension;
- binds authorization to the exact successor, constitutional state, lease, and duration;
- stops protected canonical mutation at expiry;
- returns the successor to Restricted or Safe Recovery mode at expiry;
- never converts into permanent primary-host reassignment without the Owner Authorization Ceremony.

**Implemented in:** Chapters 3, 22, 28, 30, 34, and 35.

### OR-03 — Constitutional Invariant Change

**Final rule:** A change to a Constitutional Invariant requires:

- two exact-change Owner Authorization Ceremonies;
- a mandatory 72-hour cooling-off period between ceremonies;
- a signed Constitutional Mirror;
- an independently verified recovery point;
- explicit classification that the result either preserves HAL identity or creates a successor constitutional system;
- restart of the complete process after any material proposal change;
- permanent preservation of predecessor state, authorization, and migration evidence.

Before completion of this procedure, HAL may analyze and simulate the proposal but may not enact it.

**Implemented in:** Chapters 3, 17, 29, 30, 33, and 35.

## 5. Resolved Cross-Chapter Findings

| Finding                       | Final ownership rule                                                                                                                                                   | Resolution |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| Interaction Session ownership | Chapter 31 Interaction Manager owns Interaction Sessions; Chapter 14 Presence Manager supplies presence context.                                                       | Resolved   |
| Conversation Object ownership | Chapter 12 Conversation Service owns canonical Conversation Objects; Chapter 23 Thread Service owns transport and delivery projections only.                           | Resolved   |
| Treaty lifecycle ownership    | Chapter 21 Treaty Manager is the sole authoritative Treaty lifecycle owner; Chapter 20 Constitutional Firewall consumes signed Treaty state for enforcement.           | Resolved   |
| Scheduling ownership          | Chapter 8 Scheduler owns work admission and placement; Chapter 13 Temporal Engine owns temporal constraints and projections.                                           | Resolved   |
| Identity/Authority boundary   | Identity Service and Authority Service are distinct services within one logical constitutional control domain.                                                         | Resolved   |
| Protected decision authority  | Authority Service evaluates ordinary authority and prepares protected decisions; only the Constitutional Kernel validates and commits protected decisions.             | Resolved   |
| Persistence ownership         | Persistence components are physical custodians; domain services retain semantic ownership, with Evidence, Audit, Knowledge, and Experience remaining distinct domains. | Resolved   |

## 6. Certification Tests

| Test                                                            | Result |
|-----------------------------------------------------------------|--------|
| Authoritative chapter selection                                 | Passed |
| Required formats present                                        | Passed |
| Decisions 1–58 represented                                      | Passed |
| Approved Owner rules present                                    | Passed |
| Superseded self-approval language absent from authoritative set | Passed |
| Superseded central-control wording absent                       | Passed |
| Cross-chapter canonical ownership coherent                      | Passed |

|                                         |                 |
|-----------------------------------------|-----------------|
| Revised PDFs visually inspected         | Passed          |
| Remaining Owner decisions               | None            |
| Remaining constitutional contradictions | None identified |

## 7. Certification Boundary

This audit certifies that the authoritative Book II architecture:

- faithfully implements the currently adopted Book I Constitution;
- contains coherent component responsibilities and enforcement boundaries;
- records the Owner’s approved policy choices without expanding them;
- is ready to serve as the architecture baseline for implementation planning.

This audit does not establish that any implementation conforms. Conformance of code, configuration, infrastructure, capabilities, Treaties, migrations, or operating procedures must be proven using Chapter 35’s certification process and the applicable verification policies.

## 8. Final Certification Statement

**HAL Book II — The Architecture Specification, Chapters 1–35, is certified constitutionally conformant at the document-architecture level.**

No unresolved Owner decision or identified constitutional conflict prevents adoption of this chapter set as the authoritative Book II baseline.

The Constitution remains supreme. If a future ambiguity or conflict is discovered, Book I controls and Book II must be corrected through governed change.

## Document Control

| Version | Date          | Change                                                               | Status    |
|---------|---------------|----------------------------------------------------------------------|-----------|
| 1.0     | July 27, 2026 | Final certification after Owner decisions and whole-book corrections | Certified |
